

Position Title:

Systems Engineer II

Job Description:

Candidate will provide analytical, acquisition and technical support under various DoD contracts. Apply engineering principles to investigate, analyze, plan, design, develop, implement, test, or evaluate systems. Candidate will review and prepare engineering and technical analysis reports, change proposals, and other technical documentation. Ability to apply engineering principles to perform functions such as system architecture design, computer system integration and configuration management. Candidate will analyze, design, develop, implement, and test activities related to engineering or functional requirements of computer and associated support systems. Will be responsible for supporting segments or phases of broader, more complex projects. Candidate will review technical data, including: hardware and software requirements, design documentation, equipment specifications, test plans and reports. Will provide non-standard review of technical data, including analysis of requirements, design, code and test.

Education:

Bachelor's degree from an accredited institution in Electrical Engineering, Mechanical Engineering, Computer Engineering or a related engineering discipline.

Experience:

Two (2) years of engineering experience performing the foregoing functions. Demonstrated ability to work with diverse teams.
